KYRA COMFORT™ Stirrups

KYRA COMFORT™ Stirrups

KYRA COMFORT™ Stirrups improve upon all other versions of boot-style stirrups in ways that directly benefit your patient and your staff.

The unique design of the boot accommodates legs with 4" more circumference than comparable traditional stirrups while providing 1/2" more pressure reducing cushioning.

Makes prepping easier as the medial-to-lateral foot/ankle closure system moves bothersome straps to the lateral side reducing potential interference.

Surgical teams now have more space in the operative field due to the curved support rods allowing more room to access operative space while in high lithotomy position.

The optional KYRA Secure-Lok™ Closure Straps eliminate Velcro® BRAND straps and are designed to improve infection control.

KYRA COMFORT™ Stirrups

Models/Options

	VELCRO® BRAND Closure	Secure-Lok™ Closure Straps	Secure-Release™ Integrated Clamps
KYRA Comfort™ Stirrup w/ traditional straps Part No. 470-1330-0130	Yes	No	No

Specifications

Patient Weight Capacity:	500 lbs (227 kg)
Abduction Range:	+25° to -9°
Lithotomy Range:	+85° to -55°

KYRA COMFORT™ Stirrups

The *new standard* in lithotomy positioning.

Infection Prevention Straps

KYRA Comfort Stirrups are changing the rules of the game by using non-Velcro® straps.

Simply wipe down the aerospace-strength KYRA Secure-Lok™ Closure Straps to fully clean them. No more risking infections to the patient by having leftover contaminants stuck in the hard-to-clean bristles of Velcro®.

The straps make a “pop” sound when locked into place, so you know they are secure.

As the straps latch to the outside, you no longer compromise the sterile field by having to latch to the inside of the boot. This will save you time and not get in the way of other staff.

No more pinch hazards

The KYRA Comfort Stirrup's curved support rods eliminate dangerous pinch hazards that traditional stirrups present but without the use of hard-to-clean guards.

The unique “blade design” also eliminates potential pinch hazards present when mounting traditional stirrups onto table rails.

KYRA COMFORT™ Stirrups

No more lost clamps

The Integrated KYRA Secure-Release™ Clamp solves the “lost clamp problem”.

Optional easy-to-mount, easy-to-release, the Integrated KYRA Secure-Release™ Clamp makes life easier and less hectic for staff.

More flexibility

The flexible KYRA DURAFLEX™ Stirrup Boot cradles larger legs than traditional stirrups.

The unique foot section allows extreme inversion/eversion of the foot, which eliminates the potential of contact with hard boot boxes present on traditional stirrups.

More padding

Kyra Medical's unique stirrup design allows 1/2" more padding than traditional stirrups for pressure relief.

Unlike traditional boot pads, Kyra's pad protects the medial and lateral aspect of the ankle.

KYRA COMFORT™ Stirrups

Kyra Advantage - Patient

- ✓ Bigger boot compared to traditional stirrups
- ✓ Flexible boot opens to accommodate larger patients
- ✓ 1/2" thicker padded plush cushions
- ✓ Best in industry range of motion (140° total range)
- ✓ Ankle will not rub against boot as cushions wrap around the boot sides
- ✓ Accommodates taller patients

Kyra Advantage - Infection Control

- ✓ Secure-Lok™ straps made of aerospace-strength rubber that is easily wiped down
- ✓ Straps go towards the outside, staying out of the sterile field

KYRA COMFORT™ Stirrups

Kyra Advantage - Staff

- ✓ 3 critical finger pinch-points eliminated:
 - No more accidental activations which can cause finger crush
 - No more finger crush when inserting stirrups into clamp
 - No more pinch hazard when articulating
- ✓ Optional integrated clamps (No more lost clamps or wasting time searching)
- ✓ Ergonomic handles/levers that require less effort to use and also fold out of the way
- ✓ Easier articulation operation (female in 50th percentile can easily operate)
- ✓ Faster and easier setup as straps go towards the outside, staying out of the sterile field

Kyra Advantage - Biomed

- ✓ Repair in-house (No more sending stirrups away)
- ✓ Robust stainless steel cylinder (much stronger than traditional plastic versions)
